DETAILED ACTION

Claims 1-29 are pending in the application.

Claim Objections

Claim 12 is objected to because of the following informalities: It appears the word "and", in line 2 of claim 12, should be "or" considering that the ruthenium compound is alternatively a nitrate, sulphate, etc. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Andrews et al. {US Pat. 5,026,927}.

Andrews et al. teach a process for the hydrogenolysis of a sugar feedstock in the presence of a ruthenium/phosphine catalyst, with an optional base promoter, and a solvent (see summary of the invention; Col. 2, lines 32-68 through Col. 3, lines 1-67).

10/576,487

Art Unit: 1621

The difference between the presently claimed invention and what is taught by the Andrews et al. reference is that Andrews et al. do not exemplify a hydrogenolysis process wherein water is used as solvent and wherein the hydrogenolysis is carried out at a temperature greater than 150° C. However, Andrews et al. generally teach that the solvent used in the hydrogenolysis can be, inter-alia, water and that the hydrogenolysis can be conducted at temperatures ranging from 25° C to 200° C (see Col. 3, lines 15-17 and lines 34-40).

Therefore, it would have been *prima facie* obvious to one having ordinary skill in the art to arrive at the presently claimed invention because Andrews et al. teach a similar process for the hydrogenolysis of a sugar feedstock in the presence of a ruthenium/phosphine catalyst, with an optional base promoter, and a solvent. The prereduction step and catalyst regeneration, as recited in the present claims 26-29, are obvious variants to persons having ordinary skill in the art, absent any unexpected evidence to the contrary.

One having ordinary skill in the art, desiring to arrive at other alternative means of carrying out hydrogenolysis of a sugar feedstock, would have been motivated to use any solvent, including water, and hydrogenolysis temperatures as high as 200° C as taught by Andrews et al.. Therefore, the presently claimed invention would have been obvious to one having ordinary skill in the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elvis O. Price whose telephone number is 571 272-0644. The examiner can normally be reached on 9:30am to 6:00pm.

10/576,487

Art Unit: 1621

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne L. Eyler can be reached on 571 272-0871. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
